AIS Carbon Reduction Plan 2026

Supplier name: Advanced Interior Solutions Limited

Publication date: 12th February 2026

Commitment to achieving Net Zero

Advanced Interior Solutions Limited is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2025	
Additional Details relating to the Baseline Emissions calculations.	
The company has reported its Scope 1, 2 and a defined set of Scope 3 emissions for SECR for several years. The company has also measured other additional Scope 3 emissions alongside its other impacts for Carbon Neutral certification. However significant parts of the Scope 3 emissions including project waste and all site delivery transport emissions have not been reported until 2025. These account for the majority of our Scope 3 emissions under the CRP. 2025 reflects the most accurate and detailed reporting as well as the current operations.	
Baseline year emissions: 2025	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	**0**
Scope 2	**156**
Scope 3 (Included Sources)	**1,902**
Total Emissions	**2,058**

Current Emissions Reporting

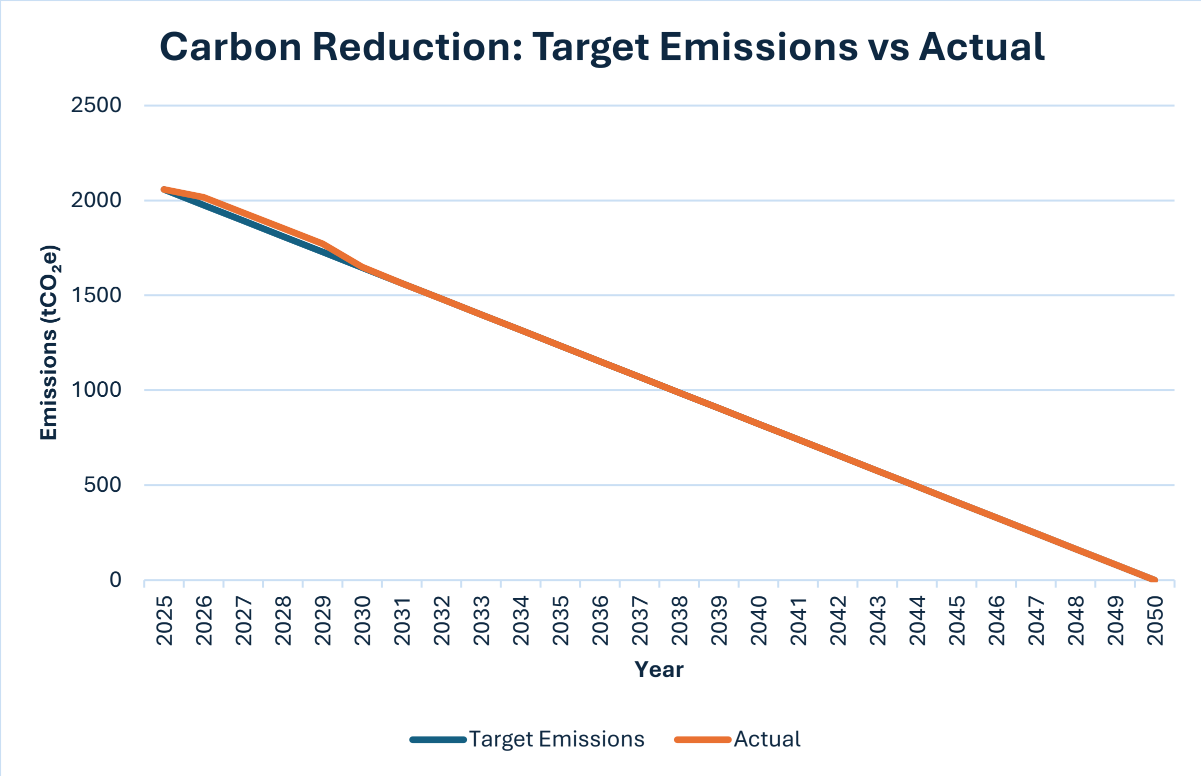
Reporting Year: 2025	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	**0**
Scope 2	**156**
Scope 3 (Included Sources)	**1,902**
Total Emissions	**2,058**

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to **1,649** tCO_2e by **2030**. This is a reduction of **19.9**%

Progress against these targets can be seen in the graph below:



Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the **2025** baseline. The carbon emission reduction achieved by these schemes equates to **41** tCO_2e, a **2** %ge reduction against the **2025** baseline and the measures will be in effect when performing the contract.

- Continued certification to ISO 14001
- Continued Carbon Neutral certification through PAS 2060
- Switching all temporary site lighting to LED
- Detailed site impact's review of waste and energy
- Implementing our ESG Strategy 2025

Future carbon reduction initiatives

In the future, we hope to implement further measures such as:

- Relocating our London offices to a building where data and monitoring of energy provide clear targets and opportunities for reductions.
- Implementing best practice procedures for the circular economy with our own office relocation. Retaining finishes in the new offices where

possible, and any new light fittings to be LED with PIR and occupancy controls.
- Ensuring100% redundant light fittings in projects are reused or recycled
- Increasing the accuracy of project data monitoring through the use of new software monitoring platforms and investment in AI.
- Implementing further site personnel training on waste and the circular economy - 1 day per annum.
- Implementing further design and management team training on the circular economy and designing out waste – 1 day per annum.
- Setting new KPIs for ESG for 2026
- Increasing supply chain collaboration through data collection and sharing, regular meetings, setting shared goals and tracking KPIs.
- Increasing local sourcing of materials and suppliers to decrease travel emissions by at least 10% by 2030.
- Discussing supplier locations with all subcontractors to decrease transport emissions
- Maintaining over 99.9% increased site waste diversion from landfill and targeting an increased recycling rate to 96%
- Extending the use of detailed Designing Out Waste workshops and Resource Management Plans for all projects, and increasing reuse opportunities
- Extending the use of take-back schemes
- Increasing site resource donations to charities and not-for-profits by 10%

Waste accounts for over half our emissions, and transport of materials to the sites accounts for about 30%, so we must focus on these elements.

Our 2025 emissions show carbon intensities:

Per m2 occupied: 4.48 tCO_2e

Per m2 projects: 0.02 tCO_2e

Per employee: 17.44 tCO_2e

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standards for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[1] and uses the appropriate Government emission conversion factors for greenhouse gas company reporting[2].

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

GRAHAM SHAW

Chief Operating Officer
